

The simplicity-preservation ranking of design levers

D = SMAD (% of $E[b^*]$ = 24.5) in second-price auctions; mean Kendall- τ error (%) in deferred acceptance. Marks: one model $\times$ domain cell; rows sorted by pooled median. pooled median ρ [95% CI] human evidence ($\diamond$)

- GPT-4o
- Claude 3.5 Haiku
- Gemini 2.0 Flash
- Gemini 3 27B
- auction (filled circle)
- DA (open triangle; secondary)
- pooled median, 95% bootstrap CI
- human anchor (reconstruction, 95% CI)
- clipped at $\rho = -1.5$ (values in note)

cross-model rank agreement (Kendall τ over lever $\times$ domain ρ)				
4o	1.00	0.71	0.55	0.58
Haiku	0.71	1.00	0.60	0.50
Gemini	0.55	0.60	1.00	0.29
Gemma	0.58	0.50	0.29	1.00
	4o	Haiku	Gemini	Gemma

Marks clipped at $\rho = -1.5$ (true values): Forward planning / GPT-4o (DA) -3.8; Forward planning / Gemma (DA) -3.9; Second-order beliefs / Gemma (DA) -4.5; First-order beliefs / GPT-4o (DA) -2.6; Menu, mechanics restated / GPT-4o (DA) -3.2; Menu, mechanics restated / Gemma (DA) -4.3; Risk-averse persona / GPT-4o (DA) -20.2; Risk-averse persona / Claude (DA) -2.4; Risk-averse persona / Gemini (auction) -2.5; Risk-averse persona / Gemma (DA) -5.8.
